

Solution Overview

Today's enterprise backup systems are complicated and highly customized. Configuring these systems correctly to perform backups across SAN, LAN and WAN environments can be complex and difficult. A single configured setting can lead to performance degradation, poor resource utilization, or worse, non-recoverability. The best way to address challenges before they become issues is through a comprehensive Backup and Recovery Health Check.

Benefits

Some of the many reasons you should partner with Mainland;

- We work closely with our vendor partners to provide customer-focused solutions that are tailored to your business needs
- Team members hold current certifications with all of the products we support.
- Our consultants have over 50 years of combined experience in the backup and recovery field
- We recruit the best. Our consultants come from diverse backgrounds in the IT industry, which allows for a deeper understanding of the challenges faced by organizations today
- We utilize a team approach that is more than the consultant that is onsite doing the data gathering. The entire backup team is leveraged to review the data gathered and peer review meetings are scheduled to find areas that may be of concern to your company

Deliverables

- Project Coordination - Provide Single Point-of-Contact for scheduling of Mainland resources and risk mitigation review to ensure quality delivery in a timely manner
- Assessment Report - that will include short, medium, and long term recommendations for improvements to the environment and adherence to best practices.

Why Mainland

Mainland provides solutions that protect, optimize and manage corporate IT infrastructure. As the rate of change and growth in the corporate digital world accelerates, there comes a point where you need to think and act differently. We do.
